Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following document:

D1: US-A-5 582 906 (ROMESBERG FLOYD E ET AL) 10 December 1996
(1996-12-10)

Document D1 is regarded as being the closest prior art to the subject-matter of claims 1, 3 & 6 and discloses a laminated headliner and a method for its production involving the steps of:

- a) applying adhesive (binding agent) to impregnate a core foam layer,
- b) adding chopped fiberglass layers onto both faces of the foam layer,
- c) laminating on additional outer layers, including a scrim,

whereby the foam layer is impregnated with resin having the catalyst **ALREADY PREMIXED** therein (see D1 col 3 line 65 to col 5 line 10 and col 6 lines 25-59).

The subject-matter of claims 1, 3 & 6 differs from this in that the catalyst is added as a **SEPARATE LAYER** to the adhesive, and the conditions (e.g. pressure) to which the assembly is subsequently subjected are used to control the mixing of binder and catalyst.

The subject-matter of claims 1, 3 & 6 is therefore new (Article 33(2) PCT).

The problem to be solved by the present invention may be regarded as how to avoid the need for premixing and heating of the binder/catalyst system in the production of a laminated headliner assembly, whilst closely controlling the setting of the binding agent.

The solution to this problem as proposed in claims 1, 3 & 6 of the present application is considered as involving an inventive step (Article 33(3) PCT) since it is not obvious from D1, alone or in combination with any prior art documents.

Claims 2, 4, 5 & 7-9 are dependent on claims 1, 3 & 6 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
